

Carlos Castillo

Lead Software Engineer

I have 12 years of experience designing and developing software in agile teams for clients in US. Strong experience with .NET tech stack but in endless loop of research and training to familiarize with other technologies. Driven by challenge I always go deep to find the best way to solve a problem. Besides development, I've played also as architect, devops, team lead, and even PM, I consider all of these are part of being a Software Engineer and are required to deliver the best ROI to clients.
